Overview:
Our client, a leading Financial Technology company based in United States, is looking for an experienced Manual Quality Assurance Analyst to join their team remotely (Nearshore). As a growing and innovative organization, they are seeking candidates who not only bring strong technical expertise but also passion and charisma to complement their existing team.

Must have skills:

- **Design and execute test scripts based upon test strategy/plans to identify defects prior to production.**
- **Experience in testing Decision Engine is mandatory.**
- **Must have experience managing test efforts, plan, and execution in Team Services/Azure DevOps**
- **Must have experience in Webservices Soap UI/Postman**

Job Summary:

- Planning and executing Quality Control and Quality Assurance for complex and large development projects.
- Creating and executing test cases, test plans, and test scripts.
- Participating in the setup and definition of test environments.
- Coordinating with business analysts and developers to ensure that business requirements are met and coded correctly.
- Responsible for creating and managing requirements tractability matrix to ensure completeness of test case coverage.
- Creating test data for the QA/UAT environment for testing purposes.

Experience:

- Bachelor's degree in computer science or related field and QA work experience needed.
- Financial domain experience is must.
- 1-2 years of experience in testing Decision Engine is mandatory.
- 3-5 years of hands-on manual software testing.
- Strong Analytical and problem-solving skills.
- Ability to work independently and as a part of a team.
- Must be able to multi-task and prioritize.
- Good knowledge of SQL.
- Adaptable: Quick to adapt to new technologies and changing project requirements, ensuring smooth transitions.
- Detail Oriented: Your attention to detail ensures that no defect is overlooked, and quality standards are maintained.
- Experience with agile software process including analysis, design, coding, system integration, and user acceptance testing, problem resolution and planning.
- Aptitude to quickly learn new business function.
- **Ideally would like someone from a financial background. Credit cards background a major plus.**
